

The group "Neural Circuits and Metabolism" at the Technical University of Munich at the Science Center in Weihenstephan investigates neural circuits with respect to olfaction and gustation in the model organism *Drosophila melanogaster*.

We are looking for a **Master (f/m)** student to carry out a project involving behavioral optogenetics and electrophysiology to understand the neural basis of decision making using the model *Drosophila*.

- we will train you in these techniques and provide supervision
- independent working and flexible working hours
- good knowledge of English is essential!

We are a dynamic, international group and are really looking for enthusiastic and energetic people who can contribute to our experiments in the laboratory.

If you are interested, please send an e-mail with your application to:
